

Emuldef 30

Silicone Defoamer

Product Description

Emuldef 30 is an antifoam emulsion of polydimethylsiloxane useful for defoaming aqueous systems. It may be used for industrial applications.

Key Performance

- Easy dispersability
- Dilutable with water
- Excellent foam control

Applications

- Carpet Cleaning
- Pesticide/herbicide formulations
- Chemical Distillations
- Waste water treatment

Typical Product Data

Property	:	Value
Appearance	:	White-Yellow liquid
Active content	:	28-35%
Viscosity (12 RPM)	:	1900-2500 cPs
Emulsifier Type	:	Nonionic
Diluent	:	Water

Instructions for use

The amount of antifoam required will be dependent upon the application; however it is recommended that evaluations begin at 10 ppm of active silicone. Prior to addition to the foaming solution, EmulDef30 should be gently agitated to insure emulsion uniformity. The EmulDef30 may then be used as received or may be pre-diluted with cool water before addition to the foaming solution.
